

LONG-TREAD LOW-RISER STEPS

Long-tread low-riser steps may be helpful to individuals who use a walker, cane or have difficulty using existing steps at their home. The stair tread shown in the pictures is 34" long and has 36" width (clear space). Stair riser height usually ranges from 3 ½ inches to 5 inches.

SWCIL can do an initial site evaluation and discuss the options available - riser height, size of stair tread, etc.
